## **Introduction:**

In the current era of digital world everything is getting digitalized and so as finding and booking room to stay also become much easier and cheaper in terms of money , time and efforts.

Hotel Management Booking System basically provides a platform for the user or travellers to search for an accommodation according to their requirements and serve them a list of room or a varieties of room at a single click from which any user can check the details of the room like:- pictures , room size, availability of room/apartment , location , name , price , etc. and if they feel that it is comfortable for them to stay than they can easily book it for them by providing their some general information.

Hence , it makes life easy and saves a lot of time for the users or for the travellers across the world by making them tension free about their stay.

# PROJECT DESCRIPTION
